

# GORBEL® CASCADING BELT CONVEYORS

Improve productivity and cube utilization  
with an **adjustable platform**

The operator platform can be adjusted  
up to 3 feet high, eliminating step-stools.

Operators can easily reach the top of  
box walls and cube out containers.

Bidirectional for loading and unloading.

## PRODUCTIVITY AND ROI

- Exceed 700 cartons per hour— that's 2-3x faster than manual unloading
- Consistent throughput by minimizing operator fatigue/injury
- Less product drops and damage
- Increase cube utilization

## FEATURES

- Flexible 5-belt design
- Extends fully into 53 ft. trailers
- Powered drive wheels motorize expansion and compaction
- Indexing mode option
- Modular belt = better serviceability

## PORTABLE

Cascading Belt Conveyor is mobile, with a lightweight aluminum frame allowing you to easily move from door-to-door. When not in use, the conveyor can be compacted and stored to save floor space.

## LIFTING PLATFORM

With a capacity of 550 lbs and adjustability to 3 ft. high, two operators can load to the top of a trailer, improving cube utilization and removing the need to use step-stools. Operator lighting boosts visibility and safety in the trailer.

## CASCADING BELTS

The bidirectional “cascading” belts can extend fully and continuously into a 53’ trailer while operating.

- 35 lbs per linear foot weight capacity
- Belt Speeds: 12 - 138 fpm (0.3 - 0.7m/s)
- Extendable from 30 to 70 ft
- Belt width: 24 in (601 mm)

## SERVICEABILITY

Many traditional telescopic conveyors are considered “confined spaces”, and per OSHA regulations, 3 technicians are required for each service call: an Authorized Entrant, an Attendant, and an Entry Supervisor. Each Cascading Belt Conveyor can be serviced by a single technician. The drive and control electronics are easily accessible and each motor is individually serviceable.
